Double Dip Caps and Grips Now Available

St. Louis, MO – March 12, 2004 -- MOCAP Inc. has added new machinery to produce double dipped caps and grips. With the new double dip process the mold is dipped twice, first in the base formula and then in the outer formula. The two formulas cure together creating a durable and attractive part. The double dip process allows us to produce a unique finished part that combines various colors, formulas and textures to improve overall appearance. Add one of our secondary process such as printing, punching, and slicing to complete the product. If your application requires a custom shape, MOCAP employs a fully staffed engineering department, which can easily produce the tooling for your job at our facility.

Caps are available in diameters from .062" to 6" and lengths from .187" to 6". Grips are available in diameters from .187" to 4.625" and lengths up to 12.5".
