New Protective Shipping Plugs

St. Louis, MO - April 2, 2004 -- Mocap Inc. is introducing their new Shipping Plugs, now produced in a brilliant red color for high visibility. Uses include thread protection, paint masking and internal protection of valves, pumps, cylinders and tubing. The flexible material compresses within open ports to form a snug fit that keeps contaminants out without leaving behind any shredded material. The risk of thread damage is virtually eliminated since no tools are required to remove plugs, which are easily removed by hand.

Standard sizes to fit threaded ports from 1/4" to 1 1/4" in diameter.
